An Exploratory Analysis of Recommender Systems

MONDAY, November 6, 2017, at 11:00 AM
Jones 304, 5747 S. Ellis Avenue

ABSTRACT

Recommender systems are ever-present within online communities and company websites. One of the most popular uses for such a system is within the media industry, specifically recommending TV shows or movies to users based on what they enjoy. This paper will attempt to explore four different types of recommender systems as applied to the MyAnimeList.Net anime data and user data, and compare the effectiveness of each system.
